TANNING SYSTEMS

The target customer for this market is the original manufacturer, OEM, of the Tanning System. The UV lamps in Tanning Systems must be replaced on a regular basis. An Hour Meter is used to keep track of the "operating hours" of the Tanning Systems. Replacing the UV lamps on a regular basis ensures the system is operating at optimum conditions at all times.

Many Tanning Systems OEM's also produce vertical Tanning Systems that "spray on" a colored fluid to give the customer the appearance of a tan. In these systems, an electromechanical counter is used to record the number of transactions.

**MODEL 40
Counter**

**MODEL 33
Hour Meter**

**MODEL 722
Hour Meter**
