

# Resistance Sensors (Low Water Detect Logic)

## Model NS157

### FEATURES

- 100% functionally tested
- Solid state sensing circuitry
- Isolated UL Class II sensing voltage
- 1/4" male fast-ons for circuit connection
- Conformal coating to protect circuit from harsh environments
-   File #E61377

**Operating Logic:** The output relay is activated when liquid touches the probe. As the liquid level drops below the probe, the relay is deactivated.

If the tank is non-conductive, a second (common) probe must be installed at a level where it will always be submerged.
