

3-Phase Voltage Monitor

Model 460L

The Model 460L is designed to protect 3-phase loads from damaging power conditions. The 460L's wide operating range combined with UL and CE compliance enables quick access to domestic and global markets.

A unique microcontroller-based voltage and phase sensing circuit constantly monitors the 3-phase voltages to detect harmful power line conditions. When a harmful condition is detected, the MotorSaver's output relay is deactivated after a 4 second trip delay. The output relay reactivates after line power conditions return to an acceptable level for a specified amount of time (Restart Delay). The trip and restart delays prevent nuisance tripping due to rapidly fluctuating line power conditions.

The Model 460L automatically senses whether it is connected to a 190-240VAC 60Hz system, a 440-480VAC 60Hz system or a 380-416VAC 50Hz system. An adjustment is provided to set the nominal line voltage from 190-240VAC or 380-480VAC. Other adjustments include a 1-500 second restart delay.
