

Features:

- Fully customizable, flexible and complete user interface
- Support for DeviceNet™ scanners
- Ability to monitor and configure up to 64 units
- Advanced data logging and graphing features
- Easy to use automatic device detection feature
- Ability to setup, configure, and save a network for fast node commissioning
- Seamless remote monitor integration
- Continuous fault and event monitoring
- Advanced setpoint and real-time parameter features including:
 - Valid ranges of setpoints
 - Detailed parameter descriptions
 - Enumerated bits/ drop down lists for setpoints
 - Enumerated bits for real-time values
 - Ability to print setpoints
- DeviceNet™ EDS file support for most devices
- Supports Automated Faulted Node Recovery

The Solutions-D software provides a way to configure many products in the 777 family of overload relays and power monitors, and with activation can be used to monitor and configure most DeviceNet™ devices.

The Solutions-D software allows you to log data from the family of 777 relays or through various display modules, such as the RM-2000, into a file on a PC for later analysis. The Solutions-D software can be used to monitor and control the family of 777 overload relays over a network.

SymCom's Solutions Software features include data logging, real-time data monitoring and fault and event monitoring. Devices can be added and configured manually or the software can scan an existing network to identify devices which can be used as is or reconfigured by the user. Setpoints for each device can be uploaded and downloaded for easy monitoring and reconfiguration. Solutions-D provides support for all DeviceNet™ capable SymCom devices and most other DeviceNet™ devices, including DeviceNet™ scanners.
